AI Usage Policy — DentaFlow Dental Clinic Platform

Purpose

This policy defines where artificial intelligence (AI) may and may not be used in the DentaFlow dental clinic platform. Its goal is to protect patient trust, clinical accuracy, privacy, and the authenticity of clinic communications.

Core rule

Do not use AI to generate clinical content, patient-facing medical advice, diagnostic conclusions, treatment recommendations, or clinical images.

All clinical decisions, diagnoses, treatment plans, prescriptions, and patient instructions must be created, reviewed, and approved by a licensed dentist or other authorized clinical professional.

Prohibited AI uses

The following AI-generated content and features must not be used in the product:

- AI-generated clinical diagnoses
- AI-generated treatment recommendations
- AI-generated prescriptions or dosage suggestions
- AI-generated patient medical or dental history
- AI-generated clinical notes presented as finalized records
- AI-generated X-rays, intraoral images, scans, or medical images
- AI-altered or synthetic patient photographs
- AI-generated before/after treatment images
- AI-generated consent forms without legal and clinical review
- AI-generated insurance claim justifications or billing codes without staff verification
- AI-generated responses to patient clinical questions
- AI-generated testimonials or patient reviews
- AI-generated content that impersonates a dentist, clinic staff member, or patient

Permitted AI uses

AI may be used only as a limited productivity aid, with human review before anything is saved or sent:

Use case	Allowed?	Requirement
Drafting internal product documentation	Yes	Product owner reviews before publishing
Summarizing meeting notes	Yes	Remove patient identifiers before using AI tools
Suggesting appointment reminder wording	Yes	Clinic manager approves templates
Helping write non-clinical UI microcopy	Yes	Product/design team reviews
Code assistance for developers	Yes	Code review, security review, and testing required
Transcribing patient calls	Conditional	Only with patient consent and secure, approved tooling
Analyzing anonymized operational data	Conditional	No patient identifiers; results are advisory only

Clinical content rules

- Dentists must author or explicitly approve all diagnoses, treatment plans, and clinical notes.
- AI must never automatically save clinical findings, diagnoses, or treatment recommendations to a patient chart.
- Any AI-assisted draft must be clearly marked as a draft until a licensed clinician reviews and approves it.
- The final patient record must reflect the clinician's professional judgment.
- AI suggestions must never override allergy alerts, medical-history warnings, or clinician judgment.

Patient communication rules

- Appointment confirmations, reminders, and recall messages may use approved templates.
- Messages containing diagnosis, treatment advice, medication guidance, or clinical instructions must be reviewed and sent by authorized clinic staff.
- Patients must not be told that AI made a clinical decision.
- If AI assists with a non-clinical message, the final message must be reviewed before sending.

Image and media rules

- Do not generate, enhance, or alter clinical images using AI.
- Do not use AI-generated patient faces, mouths, teeth, or treatment-result images in marketing or educational material.
- Use only real, consented, properly labeled images owned or licensed by the clinic.
- Marketing visuals may use licensed stock imagery or original clinic photography; they must not imply a real patient result unless they are genuine and consented.
- Any educational diagrams must be reviewed by a dental professional for accuracy.

Privacy and data protection

- Do not enter patient names, contact details, IDs, health records, images, or payment information into unapproved public AI tools.
- Use only approved, access-controlled systems with appropriate data-processing agreements.
- Apply role-based access controls and audit logging to AI-assisted workflows.
- Retain or delete AI-related data according to the clinic's privacy and record-retention policy.

Human accountability

- The treating dentist remains responsible for clinical documentation and care decisions.
- Front-desk and billing staff remain responsible for verifying appointment, payment, and insurance information.
- Product and engineering teams remain responsible for the accuracy, security, and behavior of software features.
- AI is a support tool only; it does not replace professional judgment or accountability.

Enforcement

- Product, design, clinical, and engineering leads must review new AI-related features before release.
- Any suspected misuse of AI for clinical content or patient images must be reported to the clinic manager and product owner.
- Violations may result in removal of the feature, content takedown, and internal disciplinary action where applicable.

Review

This policy should be reviewed whenever new AI features, regulations, or clinical workflows are introduced.
